## Putting the Explore back into Modern Exploration

### EXPLORATION AND EVALUATION

DiscovEx Resources Limited (“**DiscovEx**” or the “**Company**”) continued its greenfield exploration approach within the quarter with activities progressing at the Sylvania and Edjudina Projects.

Further drilling and geophysical activities continued at the Greater Duchess Project (QLD), within the Joint Venture (“**JV**”) between Carnaby Resources Limited (**ASX:CNB** or “**Carnaby**”) and DiscovEx. DiscovEx holds a 17.5% interest in the Greater Duchess tenements and is free carried through to a decision to mine.

### SYLVANIA PROJECT

Quarterly activities included the completion of drilling activities at the Sylvania Project, including the testing of multiple prospect areas (Peak, Dingo, Bondinis, Carneys and Hilditch). A total of 109 holes for 6,060m were completed with the program representing the first ever drilling completed in the area, specific for gold and base metals.

Significant gold results included 4m@76ppb Au (SYAC005) and 4m@68ppb Au (SYAC040) (refer previous announcement – 23/09/2022 “Sylvania Exploration Update”), which have highlighted a number of key structures which may potentially influence gold deposition within the Archaean basement and Fortescue-age rocks. Drilling also provided much needed and very useful information with respect to the complex regolith regime in the Northern Sylvania Dome. This information has enabled Discovex to prioritise a number of recently generated geochemical targets, including the high

DiscovEx Resources Limited

priority Contact prospect, for future drilling programs once the relevant heritage and statutory approvals can be obtained.

In addition, a number of significant base metal intersections were returned including 1m@0.15% Ni and 0.03% Co (SYAC067) and 4m@0.11% Ni (SYAC064) from a previously unrecognised older Archaean ultramafic unit, and 4m@0.12% Cu (SYAC092) and 4m@0.26% Zn (SYAC091) from weathered chert and dolerite within the Fortescue sequence.

Figure 2: Drillhole locations from aircore drilling program at Sylvania

In conjunction with the aircore drilling, a regional mapping exercise was completed by Lithify Consulting which identified a significant fuchsite altered shear zone coincident with a number of elevated gold/arsenic/antimony/silver in soil results up to 55ppb Au/34ppm As/0.56ppm

DiscovEx Resources Limited

Sb/0.38ppm Ag at the Contact Prospect (*previously announced on 23<sup>rd</sup> May 2022 – “New geochemical anomalies light up Sylvania Project”*). This partially outcropping structure is the likely source of gold and pathfinder element anomalism at Contact, with this potentially significant fluid pathway now defined over a strike length of ~2.5km, before being obscured by transported cover to the northwest. This target area will be the subject of a future Heritage survey in preparation for drill testing, anticipated to be completed by the end of the calendar year.

#### **Future Activities**

Rock chip sampling of the Contact shear zone has been completed and a heritage request submitted to traditional owners for clearance of drill sites. Several additional key tenements are progressing through the application phase of the tenement grant process with planned activities to be scheduled once completed.

#### **EDJUDINA PROJECT**

##### **Spartan Prospect**

Following the identification of the Spartan anomaly through systematic soil sampling (*refer announcement dated 5<sup>th</sup> May 2022 – “Surface sampling defines exceptional target at Edjudina”*), a 200 x 200m gravity survey, centred on the Spartan anomaly was completed (*refer announcement dated 25<sup>th</sup> August 2022 – “Gravity Survey at Edjudina”*) to provide detailed context around the geological setting of the prospect area, complementing the existing detailed magnetics. Interpretation of the geophysical information confirmed the location of a large, intrusive body to the south of the anomaly as well as a smaller, potentially structurally displaced intrusive body to the west of the anomaly (**Figure 4**). Together with the elevated geological confidence, the gravity survey has also provided complimentary information around the presence of large-scale north-south structural breaks that appear to wrap around the younger intrusive body to the south.

**Figure 4: Plan view of the Spartan 50ppb Au anomaly relative to bouger gravity image (colour) and magnetics (black and white image TMI RTP 1VD)**

Drilling of the generated anomaly was initiated during the quarter with initial results released subsequent to the end of the quarter. Results returned identified gold mineralisation across multiple horizons, the first being within carbonate rich sandy soils at surface (0-8m), repeating the original surface geochemical anomaly. Elevated gold results have also been returned from a shallow, quartz gravel (+silcrete) paleochannel at or close to the base of transported material (~32-40m) and more significantly, anomalous gold (and copper) values have also been intersected

DiscovEx Resources Limited

within in-situ bedrock material beneath the paleochannel gold results (*refer announcement dated 24<sup>th</sup> October 2022 – “Bedrock and paleochannel gold intersected at Spartan”*).

Completed holes were drilled on 200 x 50m and 200 x 100m centres, with drilling focussed on penetrating the transported cover sequence to obtain samples of the weathered bedrock. Significant gold results returned from the initial 37 holes within the broader program include 4m@2.1g/t Au from 32m within 12m@0.83g/t Au from 28m (SPAC017), 4m@0.95g/t Au from 32m within 16m@0.46g/t Au from 28m (SPAC029) and 4m@0.64g/t Au from 36m (SPAC025).

### Future Activities

Results from the ongoing AC drill program at the Spartan anomaly will be announced to the market once available.

## OTHER INTERESTS
