December 2022 Quarterly Activities Report

Highlights

- **Edjudina Project**
 - Bedrock and paleochannel gold intersected at Spartan
 - Composite results returned from first 37 AC holes (phase 1 drilling).
 - Drill program completed with an additional 151 holes drilled.
 - Infill soil sampling confirming scale and high-grade tenor of gold anomalism at the Falcon Prospect.
- **Sylvania Project**
 - Drilling activities planned pending heritage approvals.

Putting the Explore back into Modern Exploration

EXPLORATION AND EVALUATION

DiscovEx Resources Limited (“**DiscovEx**” or the “**Company**”) continued its greenfield exploration approach within the quarter with activities progressing at the Sylvania and Edjudina Projects (**Figure 1**).

Further drilling and geophysical activities continued at the Greater Duchess Project (QLD), within the Joint Venture (“**JV**”) between Carnaby Resources Limited (**ASX:CNB** or “**Carnaby**”) and DiscovEx. DiscovEx holds a 17.5% interest in the Greater Duchess tenements and is free carried through to a decision to mine.

EDJUDINA PROJECT

Spartan Prospect

Phase one aircore drilling was completed at the Spartan Prospect, targeting a previously generated 1.3km long +50ppb surface gold anomaly with a peak value of 0.54g/t Au (*previously reported on 21st July 2022 "Infill Surface Sampling upgrades Spartan Anomaly"*). Drilling was undertaken to determine the potential for gold mineralisation within insitu, weathered basement rocks and to determine the extent and distribution of gold within the overlying transported cover. Initial assays were received from the first 37 holes of the drill program with an additional 151 holes completed.

The results have identified gold mineralisation across multiple horizons, the first being within carbonate rich sandy soils at surface (0-8m), repeating the original surface geochemical anomaly.

Elevated gold results have also been returned from a shallow, quartz gravel (+silcrete) paleochannel at or close to the base of transported material (~32-40m) and more significantly, anomalous gold (and copper) values have also been intersected within in-situ bedrock material beneath the paleochannel gold results. Completed holes were drilled on 200 x 50m and 200 x 100m centres, with drilling focussed on penetrating the transported cover sequence to obtain samples of the weathered bedrock.

Significant gold results returned from the initial 37 holes within the broader program are listed below (significant results above 0.1g/t Au):

Falcon Prospect

Surface geochemical sampling was completed at the Falcon Prospect, located approximately 5km east of the Spartan Prospect. The sampling was completed to infill previous 200 x 400m spaced samples. Results confirmed the scale of the original anomaly (~3km) and upgraded the tenor, with best results returned of 98ppb Au, 95ppb Au and 51ppb Au, proximal to a previously returned sample of 48ppb Au (*previously reported on 21st July 2022 "Infill Surface Sampling upgrades Spartan Anomaly"*). A new anomaly was also generated approximately ~2km to the east of Falcon, peaking at 76ppb Au (**Figure 5**). This anomaly, known as the Hercules Prospect remains open to the north and will be the subject of an additional soil sampling campaign once E39/2334 has been granted.

Future Activities

Results from the remaining 151 AC holes at Spartan are currently pending from the assay laboratory but are expected in early 2023. Once received, all results will be reviewed and reported.

SYLVANIA PROJECT

Exploration activities continued at the Sylvania Project, however these were largely restricted to data review and drill site rehabilitation due to proposed heritage surveys being delayed.

Future Activities

Heritage requests have been submitted to traditional owners for clearance of drill lines for tenement E52/3780 (Kelpie Prospect) and tenement E52/3365 (Contact Prospect). In addition to heritage activities several additional key tenements are progressing through the application phase of the tenement grant process with planned activities to be scheduled once completed.

OTHER INTERESTS

Free Carried Interests - Carnaby Resources Limited

The Greater Duchess Copper Gold Project, held by Carnaby Resources Limited (ASX:CNB or “Carnaby”) contains several tenements that are subject to a 17.5% free-carried interest by DiscovEx and are held under a Joint Venture (“JV”) between the two parties. Carnaby are required to solely fund all costs in connection with the activities of the JV, inclusive of exploration and development until a Decision to Mine (“DTM”).

Following the presentation to the JV committee of a positive Definitive Feasibility Study (“DFS”) and a DTM is made, Carnaby will have a first right of refusal to acquire DiscovEx’s interest, equal to the fair market value. If Carnaby does not elect to acquire this interest, DCX may either contribute or dilute. If DiscovEx’s interest is diluted to less than 5%, Carnaby must acquire DiscovEx’s interest for fair market value of the remaining interest.

2. Forrester P.J. et al, 1998 (Tick Hill Gold Deposit).
3. Blake D.H. et al, 1994 BMR Bulletin 219

The free carried interest includes 12 tenements, covering an area of approximately 293km² and is located approximately 100km south-east of Mt Isa in North Queensland. In addition to the Carnaby interest, DiscovEx also holds a 2% royalty over Hammer Metals Ltd (ASX: HMX) held tenement EPM13870, which contains a portion of the Kalman Deposit including the down-plunge extent. Tenement locations are shown in **Figure 7**.
